Basic Participant Requirement / Actions & Experience

Final Cut-Off 23 May 2026: No admissions possible after 23 May

The program starts on 23 May , in online live mode, on a monthly cycle till end Sep 2026

Eligible : Officers, Other-Ranks , Spouses, Children class 12th & above, real brother & real sister with access to computer and basic proficiency on Microsoft Office tools (above MS Offie 2016 version).

Subsidized Token Charges to military families, and individual **Participant experience** is as below: -

> **Initial** One time **token** : Rs **5000**/- for Membership enrolment to MILVEST 2026

> for **each AI-ML Course,** token Charges as below : ***(4 courses*** *in sequence(1-2-3-4)*

> Approx **Rs 650/-** to enrol per course .

> approx **Rs 350/-** for invite to Certificate, If considered qualified at end of each Course

> (Optional) **Rs 1056/- for a 4-month Cover Certificate** for those clearing all 4 modules, in Nov 2026.

> further **Opportunity to enrol in IIM Shillong one month course in end year 2026** , is optional (for those clearing all 4 modules AI-ML1-2-3-4) and comes at a separate approximate contribution of Rs 5000/-

*** after initial (one-time) Membership Enrolment of Rs 5000/- to MILVEST2026, participants can also access few other valuable courses on management disciplines separately at subsidised token charges*

Participants initial actions (before cut-off 23 May 2026)

- Firstly **register** correctly MILVEST portal (This can be tricky, for those with weak digital hygiene)
- Secondly, they **Enrol** in MILVEST2026 membership
- Thirdly, they **Enrol** again in course AI-ML (1). They can then start learning immediately after enrolment.
- **After enrolment**, each participant has to upload 4 verification documents on portal ⓘ Aadhar copy (ii) Photo (iii) Educational marksheet (iv) a fauji Certificate 'to whom so ever' / euiv. dependent card
- Mandatorily Complete an initiation live workshop of 2 Hrs online live scheduled periodically on a Sunday called **DORT** (Digital Orientation & Remote Teams)

*After successful DORT, verified participants are also put in carefully created peer-group framework (MILVEST **Collab Teams**), to seek help, assist others, work in teams, **& succeed together** on technical skills.*

CLOSES 23 MAY HURRY !!

for information our Participants attend the live sessions in a webinar mode. They are encouraged to come online on the panel, with Video On,through digital raising of hands at the start of live sessions. This is also a measure to increase the pull, ensuring there is a useful engaged panel (rather than silent black walls) to progress the class, while providing preferred, convenient and quality learning experience for all, whether in panel or in webinar. We have adequate capacity to accommodate hundreds of people on our panels.

Measurement of Participant's performance is conducted on multiple parameters such as session attendance, program engagement (through post session quiz), weekend tasks to reinforce learning, and Proof of work through Team Tasks, end of course Assessment, and Team presentation. We have a high success rate of about 70% + getting certified. The primary reason for those not certified is largely absence due to personal inability to attend, lack of commitment or wastages due to negligible sense of loss to some in our highly subsidised (only tokens) charges made possible through sponsorship by the Foundation.

Our Teaching framework is most modern, insightfully **custom designed to military learning behaviour** ensuring every engaged participant learns well. It gets identified clearly if he or she is not present or engaged. The onus of attending and utilising program resources remains individually on the participant alone. All entitlements of all participants are limited to access to quality learning resources only. Certificates are only a Gift to reward learning accomplishments based on our assessment matrix.

MILVEST is India's largest skilling initiative exclusively for military families since 2020 *and has positively impacted over 10,000 military people. AI-ML is reshaping the entire professional world : outside military, in Corporates, and also on the battle zone itself.* ***Make use of this golden opportunity to acquire the globally trending skill*** *, offered under highly customised structure, at only nominal token costs. MILVEST programs are best in class and* ***atleast 90% subsidised to any comparable course*** *in India. MILVEST AI-ML courses 1-2-3-4 commencing* ***online live*** *from* ***23 May*** *2026 are* ***smart, modular, sequential, simple, convenient & custom-designed*** *for You .* ***YES !! You CAN*** *learn complex in our simplified framework !!* ***Make sure to inform everyone else too !!***

About MILVEST, Sambhav-Kadam Foundation & our 2026 Focus on AI-ML

With an experience of 6 + years in upsklling military families on modern professional skills, MILVEST is a unique and **largest skilling initiative in India with exclusive focus on military community**

Basis our research driven primary insights showcasing near **universal gaps on modern-skill** among soldiers and military families , we initiated **Project Deepak** on 26 January 2024 to **teach military families at large scale** under our in-house developed Large Program Frameworks and Common Class Room Frameworks, which help us teach online-live for thousands of people from all segments and ranks of military: Army, Navy, Airforce and Coastguard. In 2026, we have also evolved a structured and safe '**Teams Collab Framework**' to provide peer group driven interactive support. Today we have a matured **excellence framework** for teaching complex skills to military families, at scale.

Project Deepak brings **focus on emergent modern skills**, with custom designed curricula, delivered & certified jointly with **most reputed institutes** at **nominal token costs to individuals**. Our programs to individuals are **sponsored and subsidised by Sambhav-Kadam Foundation**. As a disclosure, the Foundation is non-funded, operates independently and does not receive grants from any organisation in India or Abroad. **IIM Shillong, IIT Kharagpur, Grant Thornton, IMI** are some of the associated organisations delivering our custom designed curricula for past few years. Senior retired officers **Vice Admiral G Srinivasan**, **Air Marshal Surat Singh**, **Maj Gen Harmit Singh** and Mrs **Renu Rajaram** ex Vice President NWWA (WR) are associated to MILVEST as our **Patrons**. Many other senior serving and retired officers have been learners at MILVEST under Project-Deepak design in recent years.

MILVEST2026 & AI-ML-Focus Given the increasing importance of AI-ML and a possibility to fill a large number of skill gaps on data digital and technology in one sweeping measure through the power of AI-ML, we have brought a strong focus on AI-ML in 2026. We are looking **to onboard a minimum of 3000 military family learners before cut-off 23 May 2026**, under our simplified designs. Requirement to be AI-ML equipped for Fauji children or military wives need not be explained, since every Corporate globally has AI-ML implementation as its top priority, while all entry level hiring has a mandated AI-ML compliance now.

Four sequential month-long modular courses are **pre-programmed** online **commencing 23 May 2026**, in a customised fashion to ensure high success for every military family member. The modular courses will start from scratch, build a foundation and progressively build a high level of AI-ML literacy and proficiency for its participants, in a no-code design. Everyone with commitment, interest, discipline & basic computer and Microsoft Office functionality can learn well in our design.

Need for universal AI-ML Literacy for all military personnel

Recent military conflicts in Ukraine, India-Pakistan & Iran have highlighted the changed warzone heavily laced with technology smart systems, AI-ML, and data analytics on smart platforms. *"Future wars will not be fought by strength alone, but by those who can understand, interpret, and act on data and AI enabled platforms faster than the adversary."* Across all three theatres, a clear shift is visible; from Physical dominance, Manual observation, & Experience-based judgment, to Data-driven warfare, Human–machine teaming, and AI-assisted decision-making. Faster Decision Cycles (AI compresses OODA loop), Understanding the Battlefield (Data is now as critical as terrain), Operating Modern Systems (Drones, sensors, surveillance platforms, all AI-enabled) & Countering AI Threats (You cannot defeat what you do not understand) requires a base level of AI ML literacy for all soldiers, lest we make them redundant or invite risks of delay in action and unaffordable mistakes.

Upskilling every soldier with basic skills is not an option, it is Urgent. With MILVEST 2026 we bring a unique, fully ready simple insitu solution without burden to separately spare manpower for skilling.

Sambhav Kadam Foundation

Program Overview

The modular **4-month Training Program on "AI for Business"** is expertly curated to cater to the rising demand for such skills among professionals in every sphere of business industry. Across four rigorously crafted modules spanning four months, participants will get initiated into the magnificent and highly disruptive world of Artificial Intelligence and Machine Learning through a **code-agnostic** citizen data scientist approach, which ensures that participants **do not need to have any prerequisites or qualifications** to deep dive into this seemingly technical topic. Care is taken to incorporate experiential learning and evaluative components at every step of the course delivery, ensuring participant engagement and effective knowledge retention.

AI-ML: Step-Up: Course (1)/4 : **Introduction to AI and ML**

This module is focused on explaining fundamental concepts of supervised machine learning in **a ready-to-apply format.** The focus will be on making participants capable of reaching a stage of applying the concepts **in practical scenarios**. All concepts will be practically demonstrated with customized datasets addressing major business pain points such as predicting future outcomes, conducting root cause analysis and segmenting target markets. Also, how to mine unstructured employee survey data to understand the generic mood of people through sentiment mining will be covered. All applications will be shown through open-source Python based tool Orange, which does not require any coding.

Key Takeaways

- Understanding of machine learning fundamentals
- Supervised and unsupervised machine learning applications in HR context
- Natural Language Processing (NLP) applications in HR for text mining
- Sentiment Analysis for analyzing employee grievances, exit interview data etc.

Session Plan 13 Sessions (10+3)

Session 1	History of evolution of Artificial Intelligence and types of AI
Session 2	How AI is disrupting Business – Use Case Discussion
Session 3	Introduction to Machine Learning – Key concepts
Session 4	Understanding of end-to-end process of machine learning
Session 5	Introduction to Orange, a Python-based GUI interface for AI/ML
Session 6	Practical Hands-on Training on Supervised Machine Learning (Logistic Regression) for predicting business outcomes such as loan default, churn, attrition and machine failure.
Session 7	Practical Hands-on Training on Supervised Machine Learning (Decision Trees) for conducting root cause analysis of business issues.
Session 8	Practical Hands-on Training on Unsupervised Machine Learning (K-Means Cluster Analysis) for market segmentation
Session 9	Practical Hands-on Training on Unsupervised Machine Learning (Hierarchical Cluster Analysis) for employee performance appraisal bands
Session 10	Assessment

Upon successful completion of course 1, participants will be awarded Certificate on Intro to AI /ML Applications in Business

Sambhav Kadam Foundation

AI-ML: Step-Up: Course (2)/4
Advanced Applications of AI/ML in Business- Deep Learning

Deep learning is a special sub-domain of machine learning in which complex Artificial Neural Networks (ANNs) are applied to conduct classification and other tasks for high dimensional and highly complex data such as human genes, image, video and human facial recognition, to name a few. The term 'deep' in deep learning refers to the depth of layers that a typical deep learning algorithm has for the processing of the input information. Unlike shallow machine learning models, deep learning algorithms can identify the most important features that are relevant for the prediction of the outcome. Hence there is no need for manual feature engineering. Deep learning is the backbone behind most advanced technological applications that we see today including self-driving cars, computer vision and robotics, large language models and deepfake technology. This module will orient learners towards the scope and application of deep learning in business scenarios.

Key Takeaways

- To understand the Intro mechanism of ANN
- Pros and cons of black-box algorithms
- Brief overview of applications of ANNs
- Brief overview of deep ANNs such as Convolutional Neural Networks

Session Plan 13 Sessions (10+3)

Session 1	An Introduction to Bagging and Boosting techniques (Random Forest & XGBoost)
Session 2	Introduction to Text Mining
Session 3	Conducting Text Mining for Business Data with Orange
Session 4	Sentiment Analysis of customer feedback, e-commerce reviews, social media posts etc.
Session 5	Introduction to Deep Learning (Artificial Neural Networks-ANN)
Session 6	How to apply ANNs for deep learning with Orange for robust prediction power
Session 7	Introduction to Image Analytics
Session 8	Overview of Convoluted Neural Networks (CNNs)
Session 9	Application of CNNs in Image Analytics with Orange for predicting faulty machine
Session 10	Assessment

Upon successful completion of course 2, participants will be awarded Certificate on Advanced AI /ML Applications in business

(applicable only if enrolled & completed AI-ML(1)

Sambhav Kadam Foundation

AI-ML: Step-Up: Course (3)/4
Applications of Generative and Agentic AI

This module will focus on inculcating the essential new-age applications of the revolutionary open AI tools which can reshape the way we conduct professional activities. The module aims at orienting professionals with the **potential of Generative AI tools in expediting and automating most of their day-to-day repetitive functions** and provide **hands-on experience of using open AI tools such as ChatGPT in common work-related tasks** such as documentation and report generation. This program will benefit all executives irrespective of their domain knowledge, rank and seniority. This module will help learners to efficiently use Gen AI prompts for executing professional tasks. The course will help learners to identify and differentiate between prominent AI tools like ChatGPT, Bard, Perplexity, and Llama and understand the utility, strengths, and challenges of each AI tool, specifically in business applications.

Key Takeaways

- Provide an exposure to scope of Gen AI in business functions
- Provide a brief towards various Gen AI tools – CHAT GPT, Co-Pilot,
- Provide hands-on experience of integrating Open AI tools with MS Word, Excel, Power Point etc.

Session Plan 13 Sessions (10+3)

Session 1	An Introduction to Generative Artificial Intelligence
Session 2	Key aspects of Popular Gen AI Systems – ChatGPT, Bard, Gemini, Perplexity etc.
Session 3	Applications of Gen AI in business
Session 4	Prompt Engineering for text production and text synthesis with Gen AI
Session 5	Preparing presentations with Gen AI
Session 6	Applying Gen AI to Microsoft Excel tasks
Session 7	Creating visuals with Gen AI
	Introduction to Agentic AI
Session 8	Applications of Agentic AI in business
Session 9	Security and Confidentiality issues while using Gen / Agentic AI
Session 10	Assessment

Upon successful completion of module 3, participants will be awarded Certificate on Generative and Agentic AI in business functions

(applicable only if enrolled & completed AI-ML(1 & 2)

RESPONSIBLE AND ETHICAL AI

exclusively for military Families

https://join.milvest.in

Enrolment Related Queries ask MILVEST Participants
CLICK HERE

Sambhav Kadam Foundation

AI-ML: Step-Up: Course (4)/4: **Responsible and Ethical AI**

The need for ethical AI stems from the possibilities of its misuse. For example, with rise of Deepfake technology, human faces can be superimposed on illicit video content and public figures can be portrayed in videos to incite violence and panic. Another misuse of this technology is observed in the rise of AI in generating fake news in social media platforms such as X, Instagram, YouTube, and Meta. For example, Open AI, the company behind ChatGPT, decided to scrap the commercialization of one of their AI apps which was designed to generate fake textual content. Undoubtedly, advanced AI agents can maliciously disrupt the interests of individuals, companies, and societies. ML models can accurately profile individuals based on publicly available as well as encrypted data for malicious use. This raises severe concern related to breach of rights to privacy of humans due to AI. This module orients learners towards the potential threats of misuse of AI technology and how to counterbalance such issues. This module delves into the realm of both explainable and responsible AI through real-world case appreciation and through experiential applications with real-world data

Key Takeaways

- To provide an overview of key ethical issues in context of using AI
- Real-world cases of unethical AI practice
- Types of AI Bias
- Discussing major ethical dilemmas of using AI
- Explainable AI
- Data ethics principles - General Data Protection Regulation
- Overview of the AI Act 2021

Session Plan 13 Sessions (10+3)

Session 1	What is Responsible AI?
Session 2	Major issues of data hallucinations with AI
Session 3	How can we enhance the accountability of AI-based predictions?
Session 4	Addressing the issue of AI accountability through practical examples in Orange
Session 5	What is ethics of AI?
Session 6	What are the major setbacks in terms of ethical violation by AI? (Use Cases)
Session 7	Legal frameworks as safeguards for AI Ethics
Session 8	Ensuring ethics of AI based data prediction through practical examples in Orange
Session 9	Future challenges, the advent of Artificial General Intelligence (AGI) and AI Supremacy
Session 10	Assessment

Upon successful completion of module 4, participants will be awarded Certificate on Responsible and Ethical AI management for businesses

(applicable only if enrolled & completed AI-ML (1,2 & 3)

Tools Covered

python

orange DATA MINING FRUITFUL&FUN

ChatGPT for PowerPoint

ChatGPT for Excel

GPT for Excel Word

About the Instructors

Dr. Pratyush Banerjee is an Associate Professor in HRM, OB and Communications at International Management Institute Bhubaneswar. He has a decade of teaching and training experience at various institutes of repute such as Xavier Institute of Management (XIM) Bhubaneswar, T. A. Pai Management Institute (TAPMI), Manipal, and Birla Institute of Technology & Science (BITS) Pilani. He holds a Ph.D. in Human Resource Management. Dr. Banerjee is a certified Business Analytics Professional from Carlton Advanced Management Institute (UK) and he is a Certified HR Analytics Professional from Aon-Hewitt. He has also done curriculum design for business analytics workshops by SAS. Dr. Banerjee's expertise lies in teaching code-agnostic data analytics.

He has developed and delivered post-graduate and executive management courses on HR Analytics, Data Visualization and Text Mining at several institutions and conducted executive education programs for corporate entities such as IOCL, HPCL, CGI Inc. and Poclain Hydraulics, to name a few. He has also been a guest faculty at CII's certifications program on People Analytics and at IIM Amritsar's executive education program on Data Analytics. He has also taught PGP students at IIM Indore, IIM Raipur and IIM Sambalpur as a guest faculty. Dr. Banerjee is best-selling author of two application-oriented textbooks on HR/People Analytics published by Sage and Routledge, and a book on Machine Learning from McGraw-Hill.

Dr. Rohan Mukherjee has completed his MS and PhD from Indian Institute of Technology Kharagpur in the domain of visual information processing and system design. He has also post-doctoral research experience in cutting-edge approaches of Machine Learning and AI. Prior to joining IMI Kolkata, he worked at IIM Bodh Gaya, IIM Jammu and Goa Institute of Management. Dr. Rohan has published consistently in reputed journals and IEEE conferences in his area of expertise. His current research interest includes data analytics and machine learning and their application in business. Apart from regular teaching and research, Rohan has designed a few long-term and short executive programs with EdTech partners.

A quick Note about the Cover Course "AI for Business"

The relevance of getting AI-ML ready in 2026 can not be over-emphasised. Every professional whether in the military, corporate or self-employed needs to quip himself/ herself with these modern skills to grow professionally or simply to remain relevant.

- Given the hesitation of most people, ***more specifically among the military personnel and families to avoid technology*** *and remain in the subjective over-crowded over-contested and less-valued space of operations and management, consequently losing professional relevance, professional productivity, opportunities and potential :-*

We have designed this **exceptional journey** on AI-ML starting **from scratch** to advanced and excellence levels **for novices and beginners** exclusively **among the military families.**

The journey is modular step by step on an easy monthly cycle to help you get started and gather momentum on this modern relevant and valuable professional upgrade to world of AI-ML

Your journey is well supported through innovative customised resources, frameworks and MILVEST methodology that encourages and motivates you and every fauji to succeed.

You will also have an **innovative Collab-Teams Structure** where you support your peers, seek assistance from them when required, cross hurdles as a Team, and **Succeed Together**.

The Modular Step-up design ensures quick Success-Cycles & periodic boosts to cover More.

Basis your **monthly progressive Journey** between May and October 2026, if you have received minimum three out four Completion Certificates, you will also be eligible to apply for a 4 month Cover Certificate on "Artificial Intelligence for Business"

The cover course is a simple intervention to magnify your commitment to learn and your learning achievements through a strongly spotlighted 4-month long accreditation on AI-ML capabilities; indeed more valuable than four individual one month Certificates. Meanwhile the Step-up design ensures minimum validation through monthly certificates, if you are unable to stretch all the way till the end, and have to leave mid-way due to any exigencies.

The **Cover Course by itself will require small additional course work** and pre-certificate formalities, together with an application Fee of Rs 1/- and a Token Invite to Certificate charge of Rs 1055/-, if found eligible. The Cover course will be opened in early November till December 2026 for those becoming eligible for it and applying for it timely.

Additional Courses at MILVEST 2026

While the need to upskill on AI-ML (a global priotiy) is strongly highlighted in MILVEST 2026, it caters for other needs for upskilling **on traditional management lines and business excellence frameworks too , in live, blended and self-paced formats**

ⓘ Management Essentials
(ii) Lean Six Sigma
(iii) Agile and Scrum
(iv) Design Thinking

AI-ML is on top of every Global List in terms of skills required to perform Today. Let us Make sure our people are NOT Left Behind.

Serving Soldiers
will be able to better interact and Perform with smart battle environment, equipment, weapons and Systems in the changed warzone fully laced with AI

Serving Officers
will be able to contribute to Organizational development and growth trajectory once they acquire basic understanding of AI-ML in the modern eco-system

Military Wives
(approx 10 lacs among serving soldiers) can get enormous boost to their aspirations, and explore opportunities in this era of technology and remote work

Fauji-Kids : All new hirings have a AI-ML compliant mandate for Freshers and your child makes a mark immediately

Retiring and Transitioning Personnel
AI-ML will be a show-case skill and boost your chances to get opportunities

The rise of MILVEST reflects the drive of our military community—progressive, disciplined, and determined to grow. Through varied experiences such as the Management Essentials Program, the Bengaluru Industry Immersion, and the Convocation at IIM Shillong, I have seen how MILVEST strengthens clarity, confidence, and professional readiness.

Maj Gen Harmit Singh (Retd)
Patron, MILVEST

MILVEST 2026 represents the next leap. With a sharper focus on industry-trending skills with live online courses on Analytics, and Artificial Intelligence & Machine learning; alongside Management Essentials , Agile and Scrum and Lean frameworks in self-paced mode, the program brings global-quality learning within reach of every military family. Its one-month modular structure and flexible learning modes ensure upskilling, besides being practical, purposeful, and empowering.

To scale this movement, we must participate wholeheartedly and motivate others to enroll in these enabling programs. Together, let us enable widespread participation and make MILVEST 2026 a defining step in our community's future. The platform is ready; what we build upon it is our collective responsibility.

Having transitioned from uniform to the corporate world—and having personally participated in the MILVEST 2024 programme—I have learned that the most decisive factor in professional growth today is the commitment to continuous learning. For the military community, this mindset is not merely helpful; it is essential.

MILVEST 2026 distinguishes itself by converting military experience into skills that industries value deeply. Its learning tracks in AI/ML, Business Analytics, Project and Operations frameworks, and core management tools align closely with what contemporary organisations seek in capable leaders and problem-solvers. The short-format modules and flexible schedules allow participants to build new competencies without interrupting their existing responsibilities.

AVM Narinder Taneja, AVSM VSM (Retd)

Senior Corporate Leader, Author & Mentor

MILVEST Batch of 2024

Prof. Pratap C. Biswal
Director, IMI Bhubaneswar

Our collaboration with MILVEST over the past two years has been marked by steady expansion and shared commitment to meaningful learning for the military community. What began with focused programmes in Decision Support and Analytics using Excel, Power BI, Business Analytics, Supply Chain Management, and Design Thinking has gradually evolved into a broader academic ecosystem shaped by the needs of the military learners.

As we move into MILVEST 2026, the scope and depth of IMI's offerings has grown significantly. This year's suite of programmes is aligned with global industry trends and future-ready skill requirements, ensuring that participants gain exposure to the most relevant and in-demand domains.

The expanded curriculum includes a strong focus on AI & ML blended with advanced business analytics; and a specially curated self-paced suite of Management Essentials to lay basic foundations.

Each course is crafted to blend conceptual knowledge with practical application, enabling learners to confidently navigate contemporary corporate environments or launch independent ventures. With immersive learning experiences, industry-informed insights, and outcome-driven modules, participants can expect a transformative journey that strengthens both competence and confidence.

We look forward to continuing this partnership with MILVEST and enabling many more professionals and families from the military fraternity to step into the future equipped with powerful, relevant, and globally aligned skills.

Dr Sanjeev Ningombam
Centre Head
Dr Kalam Centre of Policy Research & Analysis
IIM Shillong

Over the past two years, I have had the privilege of witnessing MILVEST's remarkable commitment to empowering the military community with vision and purpose. Supporting the Management Essentials Program at IIM Shillong was not merely an academic collaboration—it was a reaffirmation of our shared belief in the exceptional capabilities of military professionals and their families.

What truly sets MILVEST apart is its deep understanding of emerging industry demands and its proactive approach in preparing participants with relevant, future-ready knowledge. This synergy made our partnership both natural and impactful.

As we look ahead, the Dr. APJ Abdul Kalam Centre at IIM Shillong, in collaboration with MILVEST, is excited to launch a specially curated program in Oct-Nov 2026, on "New Age Technology & AI/ML for Business". This course has been designed to align with the dynamic needs of the evolving industry landscape and provide military learners with the strategic thinking, confidence, and capabilities needed to thrive in today's workforce.

Across military families, more than a million women carry the strength, adaptability, and resolve that keep our communities moving forward. As someone who has personally benefited from MILVEST programmes, I have seen how the right learning platform can transform confidence and open new doors.

MILVEST 2026 brings industry-ready, in-demand skills directly to military women—especially in AI & ML, digital tools, and future-centric domains that enable remote and flexible work opportunities. Its specialised tracks in Project & Business Management, Data Analytics, and modern workplace skills are crafted to support women beginning careers, returning after breaks, or exploring new professional pathways.

I call upon spouse networks, family organisations, and community leaders to encourage women across our units and stations to participate. With accessible formats and expert faculty, every woman—student, homemaker, professional, or entrepreneur—can find her path to growth. Let us inspire more women to learn, create, and rise with confidence through the MILVEST movement.

Mre Renu Rajaram

Former Vice President,
NWWA (Western Region)

Editor-in-Chief, WFM Media

Proud Milvestian

Joining the MILVEST Management Essentials Program in 2024 was a defining step in preparing for my transition beyond service. The structured learning, mentorship, and industry-facing curriculum strengthened my foundation and culminated in the Spirit of MILVEST Award at the 2025 Convocation at IIM Shillong.

My involvement grew as I led eight editions of MILVEST Insights and supported multiple initiatives as a Strategic Project Lead—experiences that broadened my perspective, sharpened my skills, and connected me with an inspiring learning community.

As I prepare to hang my uniform, I move forward with clarity and confidence—empowered by what MILVEST has enabled.

MILVEST 2026 now offers even stronger pathways through focused tracks in Analytics, AI/ML, digital skills, Operations Excellence, and management essentials aligned with industry needs. I encourage serving personnel, veterans, spouses, and young professionals to take this opportunity.

MILVEST has shaped my journey meaningfully.
